

COL772 ASSIGNMENT 1

MACHINE LEARNING

Saket Dingliwal
2015CS10254

Part 1

Normalization of data is done. Linear Regression was done which works well for any number of input feature vectors. Gradient Descent was used for obtaining minima of the error function. Convergence condition used is the difference of error value approaching a small value.

Epsilon used = 10^{-15}

Learning rate = 0.0008

Number of Iterations = 222

Value of J-theta = 0.00011947898

Result => $y = 0.00134x + 0.9966$

Plot

The 3-d plot for error function

Contour plot for the learning rate
